Advances in Logic - Vol. 5

# The Functional Interpretation of Logical Deduction

This comprehensive book provides an adequate framework to establish various calculi of logical inference. Being an 'enriched' system of natural deduction, it helps to formulate logical calculi in an operational manner. By uncovering a certain harmony between a functional calculus on the labels and a logical calculus on the formulas, it allows mathematical foundations for systems of logic presentation designed to handle meta-level features at the object-level via a labelling mechanism, such as the D Gabbay's Labelled Deductive Systems. The book truly demonstrates that introducing of 'labels' is useful to understand the proof-calculus itself, and also to clarify its connections with model-theoretic interpretations.

**Readership:** Researchers, professionals, academics and graduate students in theoretical computer science, (analytic) philosophy, and logic and set theory.

IISc Research Monographs Series - Vol. 2

## MODERN APPLICATIONS OF AUTOMATA THEORY

edited by **Deepak D'Souza**  
(*Indian Institute of Science, India*) &  
**Priti Shankar** (*Indian Institute of Science, India*)

This book is intended to fill that gap and can be used as an intermediate-level textbook. It begins with a detailed treatment of foundational material not normally covered in a beginner's course in automata theory, and then rapidly moves on to applications. The book is largely devoted to verification and model checking, and contains material that is at the cutting edge of verification technology. It will be an invaluable reference for software practitioners working in this area.

**Readership:** Computer scientists interested in the practical applications of automata theory; practitioners interested in modern verification techniques.

**Highly Recommended**

## NEW FRONTIERS IN EVOLUTIONARY ALGORITHMS: Theory and Applications

by **Hitoshi Iba** (*University of Tokyo, Japan*) &  
**Nasimul Noman** (*University of Tokyo, Japan*)

The emphasis of this book is on applicability to the real world. Tasks from application areas – optimization of the trading rule in foreign exchange (FX) and stock prices, economic load dispatch in power system, exit/door placement for evacuation planning, and gene regulatory network inference in bioinformatics – are studied, and the resultant empirical investigations demonstrate how successful the proposed approaches are when solving real-world tasks of great importance.

**Readership:** Undergraduates, postgraduates and researchers specialising in computer science, especially Genetic Algorithms (GA).

## THE HANDBOOK ON REASONING-BASED INTELLIGENT SYSTEMS

edited by **Kazumi Nakamatsu** (*University of Hyogo, Japan*) & **Lakhmi C Jain** (*University of South Australia, Australia*)

This book consists of various contributions in conjunction with the keywords "reasoning" and "intelligent systems", which widely covers theoretical to practical aspects of intelligent systems. Therefore, it is suitable for researchers or graduate students who want to study intelligent systems generally.

**Contents:** Reasoning Based Systems — Theories, Applications and Modeling; Stability, Chaos and Limit Cycles in Recurrent Cognitive Reasoning Systems; New Adaptive Intelligent Learning System for Online Learning Environments; Automatic Test of Embedded Peripherals: How Artificial Evolution may Outperform Experience; Immune System-based Customer Data Clustering Techniques in an e-Shopping Application; Integrated Knowledge Representations and Reasoning Approaches; Some Studies on Data Mining; Interpretation of Statistical Modeling with Computational Intelligence in the Human Sciences; Rough Sets Non-deterministic Information Analysis — A Rough Sets Based Framework for Handling Incomplete Information; On Semi-Supervised Clustering; The Discovery of Telephone Call Patterns by use of Intelligent Reasoning; Limits Imposed by Logic on Computer Science; New Approach for Enhancement the Quality of Images of Signatures and Fingerprints; A Family of Heuristic Algorithms for Allocation Problems, Based on a Nonclassical Logical Substruct; Approximate Processing in Medical Diagnosis by Means of Deductive Agents; Knowledge Representation for Electric Circuits in Logic Programming; Rough Sets as a Basis for Decision Data Analysis; An Intelligent CBR System for Severe Weather Forecast; Non-Classical Logics and Reasoning-Based Systems and other papers.

**Readership:** Graduate students, software engineers and researchers in theoretical computer science, artificial intelligence and neural networks.
